7. You need to prepare a presentation on the greatest invention-Computers in a national seminar. The required information is given below. Prepare 3 slides.

Computers are capable of doing extremely complicated work in all branches of learning. They can solve the most complex mathematical problems or put thousands of unrelated facts in order. These machines can be put to varied uses. For instance, they can provide information on the best way to prevent traffic accidents, or they can count the number of times the word 'and' has been used in the Bible. Because they work accurately and at high speeds they save research workers years of hard work. This whole process by which machines can be used to work for us has been called 'automation'. In the future automation may enable to have human beings far more leisure than they have today. The coming of automation is bound to have important social consequences. Computers, though highly efficient, need detailed instructions from human beings to be able to operate. Computers can be plugged into a national network and be used like radios. They also make tiny translating machines. It is used in public hospitals with details about the patient's systems and pathological data and to keep a check on a patient's health record. Book keepers and accountants too can be relieved of dull clerical work.
